

## About Me

My name is Ivan Mitkovski, born on 06.07.2004 in Skopje. I have a high school degree in classical guitar and a lifelong passion for music. Over the years, I've had the honor of participating in and earning medals at several international classical guitar competitions, demonstrating my commitment to excellence and artistry. As a naturally creative individual with a strong curiosity for technology and science, I made the exciting decision to pivot my focus towards computer science. I am currently studying this field with great enthusiasm, eager to apply my problem-solving skills and creativity to innovate and contribute to the tech industry.
